PROFESSIONAL PROFILE

Curious and self-driven data scientist with work-experience obtained at NASA's JPL. My role as a Data Science and Analyst intern at Jet Propulsion Laboratory included fetching raw proprietary data, applying data handling techniques, and performing data analysis to improve the effectiveness and efficiency of JPL's Training Center. My work required knowledge in Data Integration and merging, SQL, Python, and PowerBI. I am a rising Senior at Cal State Northridge studying Computer Science and Statistics. I am an NSF funded research assistant for Dr. Mojirsheibani; we are implementing virtual re-sampling approaches in Big-data scenarios to develop Higher Criticism Statistics for multiple testing.

EXPERIENCE

NASA Jet Propulsion Laboratory

Data Science Intern | Summer 2025

- Analyzed proprietary datasets (350K+ entries) to improve training efficiency and benchmarking for flight projects, including Mars 2020.
- Merged multiple internal datasets and engineered new variables by scraping and extracting information from external sources using Python and Excel. Visualized key insights with Power BI and Python library Seaborn.
- Presented findings and strategic recommendations to Division Directors; used GitHub to maintain reproducible workflows.
- Maintained code and documentation in GitHub to ensure reproducibility, version control, and collaborative development.

NSF funded Research Assistant – Statistics Dr. Majid Mojirsheibani

California State University, Northridge | Fall 2025

- Implemented bootstrap resampling methods from scratch to support research on Higher Criticism statistics for multiple-testing problems in Big Data.
- Collaborating on developing computationally efficient statistical methods for large-scale inference.

Algorithm Design- Computer Science

California State University, Northridge | Fall 2025

- Modify Dijkstra's algorithm to handle graphs with dual edge weights, developing an efficient approach for multi-criteria shortest-path optimization.

Teacher Assistant – Mathematics

California State University, Northridge | Fall 2024

- Led weekly peer-assisted sessions to support students in a historically low-pass-rate math course, resulting in higher success rates among attendees.
 - Designed targeted lesson plans and review materials aligned with course content and exams.
 - Held regular office hours, provided one-on-one academic support, and collaborated with the course instructor to address learning gaps.
-

EDUCATION

Bachelor of Science Computer Science and Statistics | GPA: 3.75

California State University, Northridge

SKILLS

- Statistical Modeling | Data Analysis | Data Structures | Data Preprocessing | Feature Engineering
- Python | R | Java | SQL | Database Design | Git | Numpy | Pandas | Scikit-learn | Seaborn | Matplotlib | PowerBI
- Model evaluation | Machine Learning | Linear Algebra | Numerical Analysis

Bilingual: English, Farsi

RECOGNITION

- Outstanding Undergraduate Mathematics Award | Leslie and Terry Cutler Scholarship Endowment in Science and Mathematics | Dean's List
- NASA Open Science Certification
